COMPANY PROFILE & INDUSTRY SOLUTIONS

Growth is engineered.

Technology, design and intelligence—built around the way businesses actually work.

RISHEH

ریشه · معماری رشد پایدار

01 / THE BELIEF

More technology does not automatically mean more progress.

Businesses have more software, channels and data than ever before. Yet the work often remains fragmented.

A customer submits a request on a website. Someone transfers it to a spreadsheet. A team discusses it in a chat. A manager checks another dashboard to find out what happened. Each tool may work in isolation; the business system does not.

This is the gap Risheh aims to close. We bring product thinking, engineering, automation and growth together so the digital experience supports the operational reality behind it.

We do not believe in accidental growth.

02 / OUR ROLE

Not another vendor. A partner in building.

Risheh approaches digital transformation as a design and engineering challenge—not a shopping list of features.

We start with people and processes: what a customer is trying to accomplish, what a team needs to deliver, where information gets lost, and which constraints genuinely shape the solution. From there, we define the right product scope, architecture, experience and operating model.

Sometimes the right answer is a focused website. In other cases it is a multi-role platform, a reliable integration between existing services, a specialized AI workflow, or a carefully staged modernization program. The choice should follow the problem—not the fashion of the moment.

Discover the system. Design the experience. Engineer the change.

03 / THE APPROACH

One business problem. Several disciplines. One coherent direction.

DISCOVERY
Business analysis, product discovery, market context and measurable outcomes.

DESIGN
Information architecture, user experience, identity and product systems.

ENGINEERING
Web applications, platforms, APIs and dependable foundations.

CONNECTION
Workflow automation, integration, structured data and AI assistance.

The mix is project-specific. No single technology stack or delivery model is imposed on every client.

04 / INDUSTRY FOCUS

We organize our work around industries, not buzzwords.

The same technology can solve very different problems in a school, a clinic, a workplace or an online business.

Education

School operations & learning

Health & care

Trusted service journeys

Work & operations

Connected teams & knowledge

AI infrastructure

Responsible agents & control

Career technology

Discovery, matching & alerts

Digital commerce

Product data & purchasing

Professional services

Clear services & client journeys

The following profiles distinguish repository-backed projects from broader solution capabilities. Product maturity and production claims are not inferred from README feature lists.

INDUSTRY 01 / EDUCATION

A school is an ecosystem of people, not a collection of forms.

A principal needs a coherent operational view. Teachers need a reliable flow for instruction and assessment. Parents need relevant information about their children without exposure to other students' records. Children need experiences appropriate to their age. When these requirements are distributed across disconnected systems, administrative effort grows and context disappears.

HOW RISHEH APPROACHES IT

We design educational platforms around roles, permissions, school configuration and clear daily workflows. The objective is to give each participant an appropriate view of the same trusted underlying system.

01

SELECTED WORK / EDUCATION

Hamyar School / MySchoolPlatform

A multi-tenant School Operating System described in the repository with school management domains, role-scoped experiences, configurable modules and an elementary experience layer. Its architecture emphasizes tenant isolation and a shared core rather than separate forks for individual schools.

SOURCE / PROJECT REFERENCE

https://github.com/mahamirmh/myschoolplatform

EVIDENCE & SCOPE NOTE

Repository-backed engineering case; rollout status varies by module and environment.

WHY THIS MATTERS

We design educational platforms around roles, permissions, school configuration and clear daily workflows. The objective is to give each participant an appropriate view of the same trusted underlying system.

INDUSTRY 02 / HEALTH & CARE

In sensitive services, clarity is part of trust.

When a person looks for counseling or a specialist service, they may not know which option is appropriate. The digital experience must help them discover reliable information and take the next step without fabricated endorsements, ambiguous pathways or promises of outcomes. Editorial structure, accessible navigation and data protection matter as much as visual polish.

HOW RISHEH APPROACHES IT

We connect service discovery, educational content, consultation requests and operational handoffs. Human professional judgment remains central; software supports the journey without pretending to replace clinical expertise.

02

SELECTED WORK / HEALTH & CARE

Entekhab Platform

A Persian-language PWA documented with service discovery, an editorial content hub, specialist information and a structured consultation request journey. The repository explicitly favors source-backed content and avoids invented ratings or profiles.

SOURCE / PROJECT REFERENCE

https://github.com/mahamirmh/Entekhab-Platform

EVIDENCE & SCOPE NOTE

No therapeutic outcome, medical effectiveness or full production verification is claimed.

WHY THIS MATTERS

We connect service discovery, educational content, consultation requests and operational handoffs. Human professional judgment remains central; software supports the journey without pretending to replace clinical expertise.

INDUSTRY 03 / WORK & OPERATIONS

Every disconnected decision creates operational friction.

Inside teams, a decision can start in a conversation, become a task somewhere else, affect a repository and end up as a document nobody can find. A workplace needs more than another dashboard: it needs continuity between communication, responsibility, execution and organizational knowledge.

HOW RISHEH APPROACHES IT

Our approach combines collaboration, task context, permissions, documentation and engineering integrations in a coherent workspace. This is not about centralizing everything blindly; it is about making critical work traceable and useful.

03

SELECTED WORK / WORK & OPERATIONS

Risheh Core

Risheh’s internal workspace, documented across communication, projects, tasks, knowledge, engineering rooms and integrations. Its purpose is to preserve context across the lifecycle from conversation to implementation.

SOURCE / PROJECT REFERENCE

https://github.com/mahamirmh/Risheh-Core

EVIDENCE & SCOPE NOTE

Internal product. Confidential screens, user data and internal documents are intentionally excluded.

WHY THIS MATTERS

Our approach combines collaboration, task context, permissions, documentation and engineering integrations in a coherent workspace. This is not about centralizing everything blindly; it is about making critical work traceable and useful.

INDUSTRY 04 / AI & AGENT INFRASTRUCTURE

An agent is only useful when its actions can be governed.

Connecting an AI model to business tools introduces operational questions: What can it access? Which actions need approval? How can a repeated request be handled safely? What evidence exists after execution? These are architecture problems, not prompt-writing details.

HOW RISHEH APPROACHES IT

We treat agent identity, capability contracts, policy boundaries, auditable execution and human oversight as core parts of AI engineering. The business domain retains ownership of its source of truth while shared infrastructure handles reusable execution concerns.

04

SELECTED WORK / AI & AGENT INFRASTRUCTURE

Risheh AI Platform

A shared AI foundation with documented capability routing, versioned contracts, execution persistence, idempotency and audit concepts. The README differentiates reference implementations from production-ready multi-tenant infrastructure.

SOURCE / PROJECT REFERENCE

https://github.com/mahamirmh/Risheh-AI-Platform

EVIDENCE & SCOPE NOTE

Some components are reference or local implementations—not a claim of production enterprise deployment.

WHY THIS MATTERS

We treat agent identity, capability contracts, policy boundaries, auditable execution and human oversight as core parts of AI engineering. The business domain retains ownership of its source of truth while shared infrastructure handles reusable execution concerns.

INDUSTRY 05 / CAREER TECHNOLOGY

The value is not more vacancies. It is better decisions.

Specialized career journeys become difficult when opportunities are scattered and eligibility is hard to assess. Users must compare requirements, understand missing evidence, track applications and receive relevant alerts. Automated systems should reduce noise while keeping their reasoning inspectable.

HOW RISHEH APPROACHES IT

We combine data ingestion, structured classification, explainable matching, scheduled processing and communication workflows for domain-specific services. Accuracy and source integrity must be addressed alongside convenience.

05

SELECTED WORK / CAREER TECHNOLOGY

Risheh NHS JobBot

A Django, PostgreSQL, Redis, Celery and Telegram-based project for medical job discovery, matching, application readiness and alerts. Its README describes an explainable workflow rather than a generic vacancy notification bot.

SOURCE / PROJECT REFERENCE

https://github.com/mahamirmh/rishehjobnhsbot

EVIDENCE & SCOPE NOTE

Repository-described functionality; independently verified employment outcomes are not claimed.

WHY THIS MATTERS

We combine data ingestion, structured classification, explainable matching, scheduled processing and communication workflows for domain-specific services. Accuracy and source integrity must be addressed alongside convenience.

INDUSTRY 06 / DIGITAL COMMERCE

A smooth storefront needs disciplined operations behind it.

A customer sees a product page and checkout. The business sees inventory, catalog quality, channel integration, order state, fulfillment and support. Weak links behind the scenes eventually become customer-facing friction, especially when catalog size and sales channels grow.

HOW RISHEH APPROACHES IT

Risheh can support commerce experience design, WooCommerce customization, product-data modeling, catalog cleanup, operational integrations and tailored shopping journeys. We choose between packaged systems and custom platforms according to the operational context.

06

SELECTED WORK / DIGITAL COMMERCE

Commerce Solutions

A capability area spanning e-commerce engineering, inventory and product data, workflow automation and conversion design. Named client case studies should be added only with publication approval and supporting evidence.

SOURCE / PROJECT REFERENCE

https://github.com/mahamirmh

EVIDENCE & SCOPE NOTE

Capability area; no client metrics or fabricated project results included.

WHY THIS MATTERS

Risheh can support commerce experience design, WooCommerce customization, product-data modeling, catalog cleanup, operational integrations and tailored shopping journeys. We choose between packaged systems and custom platforms according to the operational context.

INDUSTRY 07 / PROFESSIONAL SERVICES

Trust becomes action when the next step is clear.

For a legal practice, real-estate business, consultancy or specialist firm, the online journey often begins before a conversation. People need to understand a service, evaluate credibility and confidently submit a request. Complex navigation and disconnected lead handling undermine that journey.

HOW RISHEH APPROACHES IT

Our work connects content strategy, landing pages, information architecture, inquiry flows, CRM handoff and operational dashboards, designed with each industry’s regulatory and privacy boundaries in mind.

07

SELECTED WORK / PROFESSIONAL SERVICES

Specialist Service Platforms

A solution category for service businesses that need more than a brochure website. Individual client names, screenshots and delivery claims require case-by-case publication clearance.

SOURCE / PROJECT REFERENCE

https://github.com/mahamirmh

EVIDENCE & SCOPE NOTE

Capability area, not a claim that every named vertical has a completed public case study.

WHY THIS MATTERS

Our work connects content strategy, landing pages, information architecture, inquiry flows, CRM handoff and operational dashboards, designed with each industry’s regulatory and privacy boundaries in mind.

05 / DELIVERY MODEL

From ambiguity to a product people can use.

01 / UNDERSTAND
Explore the business need, audiences, process constraints and measurable success criteria.

02 / FRAME
Define a clear scope, priorities, architecture choices and delivery assumptions.

03 / DESIGN & BUILD
Create useful journeys and engineering foundations; implement capabilities in reviewable increments.

04 / VERIFY
Test quality, permissions, integrations and operational assumptions against agreed acceptance criteria.

05 / DELIVER & EVOLVE
Document, deploy, transfer knowledge and plan subsequent improvements where agreed.

06 / ENGINEERING PRINCIPLES

Quality is what happens after the demo.

A convincing interface matters. So do the parts customers rarely see.

We design for maintainability, appropriate security controls, sensible access boundaries, controlled releases, useful documentation and evidence-led verification. An architecture should be understandable to the people who will operate it; a product should be adaptable without unnecessary complexity.

These are working principles, not unconditional warranties. Testing scope, operational support, hosting, security requirements and service levels are agreed for each engagement.

Reliable boundaries

Clear roles, data ownership and integration responsibilities.

Designed to evolve

Modular architecture and staged product roadmaps.

Operational clarity

Observability, release discipline and documentation.

Measured usefulness

Relevant business and user experience indicators.

07 / WAYS TO WORK TOGETHER

Different starting points. One commitment to clarity.

For some teams, the challenge is defining what should be built. For others, the problem is a legacy system that no longer supports their ambitions. Some need a new digital product; others need to connect systems they already trust.

Risheh works across product discovery, custom development, platform modernization, user experience redesign, automation and integrations, and ongoing improvement under defined agreements. Each engagement should make the scope, responsibilities, deliverables, dependencies and acceptance criteria explicit.

The right scope is the one that moves the business forward.

08 / AN INVITATION

Let us build what comes next.

Growth does not begin with a feature list. It begins with a clearer understanding of the business you want to become.

If your teams are navigating fragmented tools, a growing product, changing customer expectations or new opportunities for automation and AI, Risheh can help turn that complexity into a direction that can be designed, engineered and improved.

We believe in technology that earns its place in a business—through better experiences, clearer workflows and systems ready to evolve.

RISHEH
Growth is engineered.
